Contents

1. <u>General</u>

The primary objective of this project is to provide means to monitor the activities done on your Personal Computer (PC) during your presence or absence. It will help keep you notified about what is being typed into your computer, what applications are being used, what sites are being visited and as visual aid we even aim to give you screenshots of your desktop at regular intervals. The software should do all this without affecting the normal functions of your PC and does not interrupt in your day-to-day use of your computer.

Once started it should run perfectly on its own without the need of any more initiations. It even restarts on its own when the computer is restarted. Also the software will be made invisible to naïve users so that it cannot be detected easily and stopped. All the actions are further password protected to ensure another layer of security
2. <u>System Requirements</u>

EyeSeeYou needs the following system requirements:-

    a.   Microsoft Windows NT Operating System
    b.   Microsoft .Net Framework 4
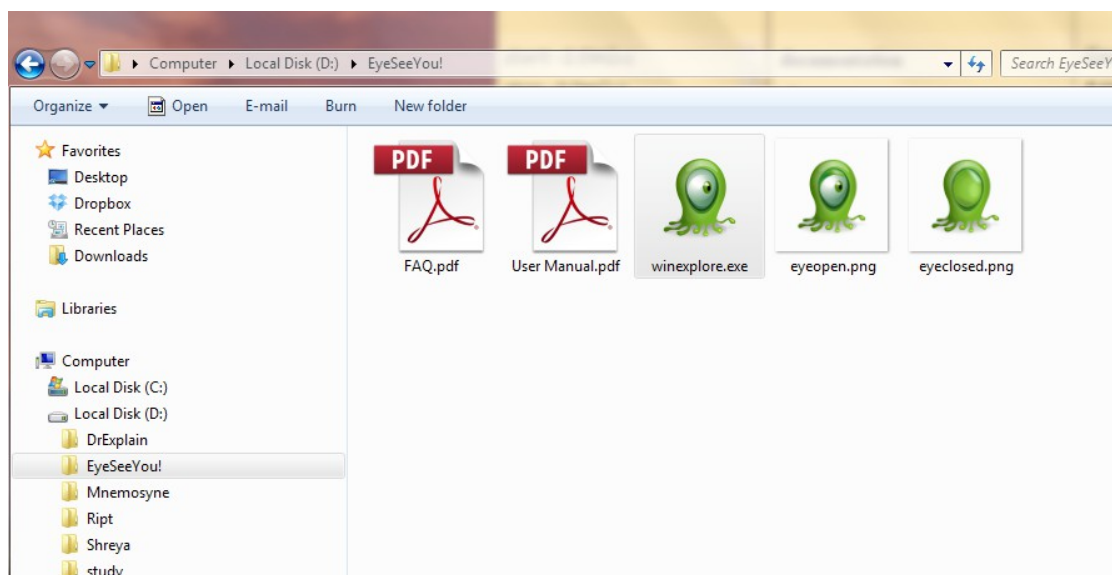

3. <u>Installation</u>

EyeSeeYou does not have a separate installation procedure. We deliver EyeSeeYou as a zipped folder. To run EyeSeeYou, perform the following steps:-

1. Extract the folder from the zipped file to a drive in your computer (ensure that the folder allows you to create files in it).
2. Open the folder and find the file "winexplore.exe".

3. Double click the exe file to start EyeSeeYou.

4. <u>System Settings</u>

Before you can start using EyeSeeYou, you have to specify the user settings. A step-by-step guide to using EyeSeeYou for the first time is given below:-

1. The first screen you see is the login screen

Enter username and password n the respective fields. The username is "EyeSeeYou" and the default password is "Surveillance".

2. The next screen you will see is the General settings screen.

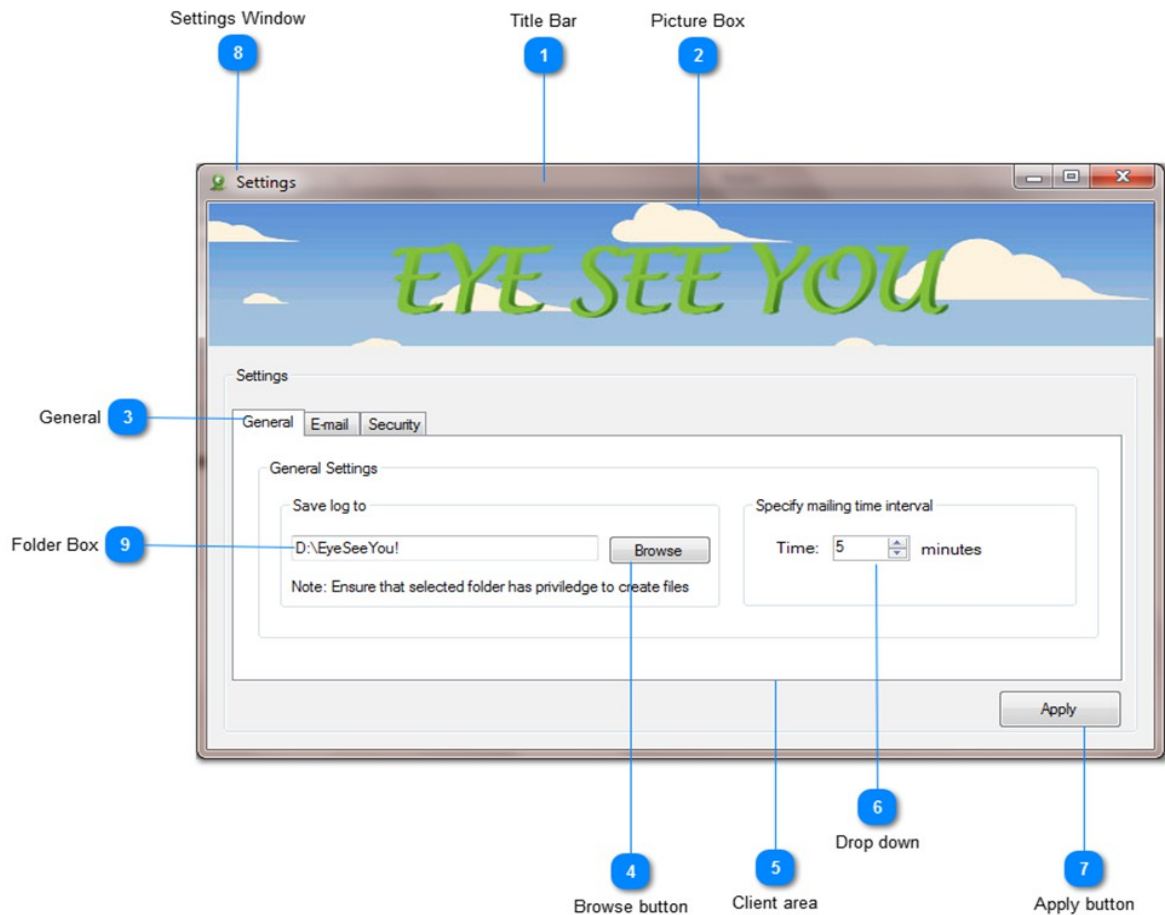

- On the left side of the screen, you have to specify the folder in which the temporary files (which are to be mailed) are being created. Always ensure that the folder selected has the permissions to create files.

- On the right hand side, you specify the time interval at which you want the mails to be sent. The default time interval is 5 minutes. The maximum time interval is 30 minutes.

3. In the next tab of the settings screen specify the email settings. There are six fields here:
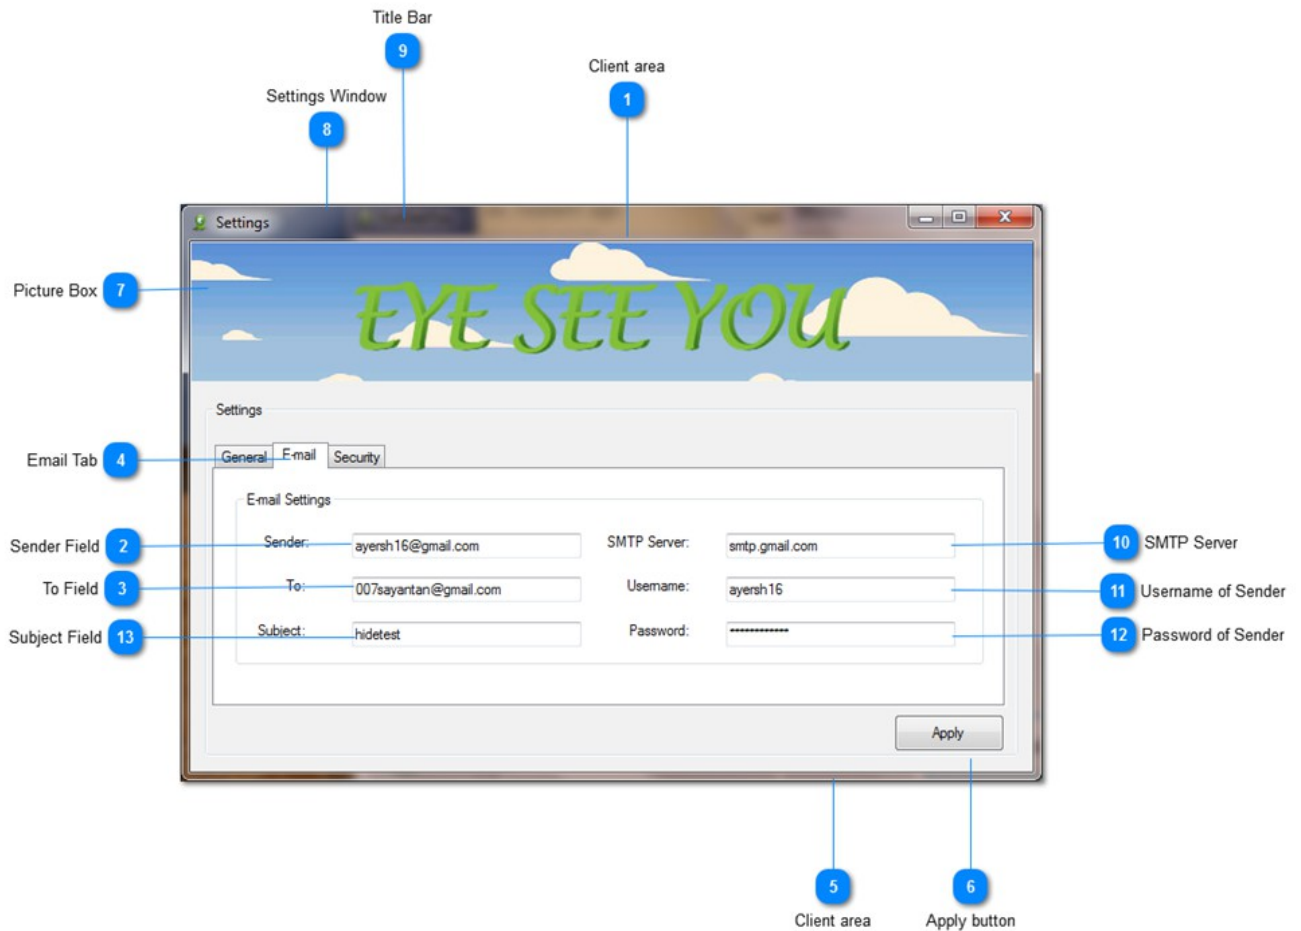

i) **Sender**- Enter email id from which mails are to be sent

ii) **To**- Enter the email id which will receive the mail.(This email id can be the same as the sender)

iii) **Subject**- Specify the subject of the mail.

iv) **Smtp**- Specify the smtp server of the email provider of **Sender**. Smtp server address can be obtained from the internet.

v) **Username**- Specify the username used to login to the **Sender's** email account

vi) **Password**- Specify the password used to login to the **Sender's** email account.

4. The next tab is the security settings tab. In this tab you can change your password. Although you may keep the default password, it is not advisable to do so. To change the password perform the following steps:
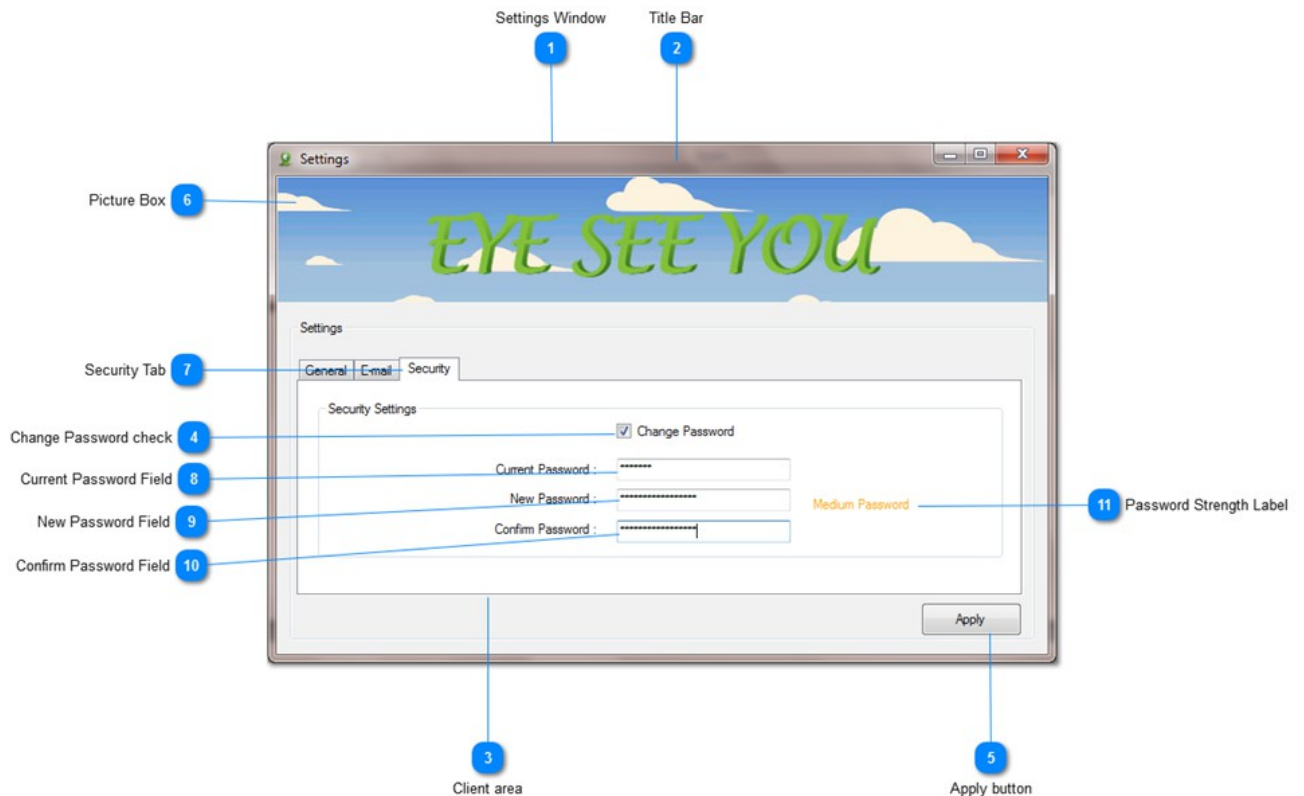

- Check the "Enable Password" checkbox
- Enter current password
- Enter new password
- Confirm new password

5. Once all your user setting have been specified, click on the apply button.

5. <u>Final Installation Steps</u>

Before you start using EyeSeeYou, you have to perform the following tasks:

1. Set your antivirus security settings to trust EyeSeeYou

2. Whitelist your application so that it is not blocked by the firewall.

3. If you own Windows 7, you have to disable the UAC (User Account Control) so that the application starts at start-up.

6. Usage

After you have specified all the settings, you are taken to the EyeSeeYou main page. There different features of the different parts of the page are given below:

1. **Start Button-** When clicked, it starts EyeSeeYou activities and it starts logging your computer.

2. **Stop Button-** When clicked, it pauses EyeSeeYou activities and it stops logging your computer. It however keeps the user records intact. Stopping is password protected.

3. **Hide Button-** When clicked, it sends EyeSeeYou into stealth mode. You have to press the hotkey (Alt+G) to retrieve EyeSeeYou from stealth mode.

4. **Uninstall Button-** This button is used to exit EyeSeeYou. It not only stops it from logging your data, it stops all EyeSeeYou activities and deletes all user

records. It is exactly like uninstalling any Windows application. Uninstall is password protected.

5. **Control Button-** This button redirects you to the settings page described in System Settings. This is also password protected.

6. **About-** This contains two links-

      i. **About Us-** Tells you more about the developers
     ii. **About EyeSeeYou-** Tells you more about the software

7. **Help-** This contains two links-
      i. **User Manual-** Opens this User Manual
     ii. **FAQ-** Answers some frequently asked questions by users

7. <u>Testing The Software</u>

Given below are ways in which you can check whether your software is working properly:

- On clicking the start button, the background picture changes and a label appears which says "Eye See You"

- On clicking the stop button, the background picture changes and the label changes to "Eye Don't See You"

- When EyeSeeYou has been activated, you can check your mail at regular intervals to see if the mails arrive

8. <u>Troubleshooting</u>

Unfortunately, EyeSeeYou is still in its infant stages. We have attempted to test it thoroughly but we are certain that there may be some hiccups along the way. Whenever you face any difficulties, please e-mail us your feedback.
